Mobile Developer | React Native & Flutter

Mobile Developer specializing in React Native, TypeScript, and Flutter/Dart, with hands-on experience designing and building mobile applications integrating AI, Firebase, REST APIs, and real-time communication systems.

Experienced in integrating native iOS and Android features, designing mobile architectures, and optimizing application performance, reliability, and latency.

Compétences techniques

Mobile Development : React Native, Expo, TypeScript

Backend & Databases : Node.js, Firebase, Cloud Functions, Firestore, PostgreSQL

APIs & Real-Time Communication : REST APIs, WebSockets, Third-Party APIs

Cloud & DevOps : Google Cloud, Docker, GitHub Actions

IA : Gemini API, LLM Integration, Real-Time Voice AI

Outils : Git, GitHub, Postman

Architecture : Client-Server, Real-Time Systems, API Design, Performance & Latency Optimization

PROJECTS

IZEM — AI Fitness Coach | Independent Mobile Project

- Designed and developed an AI-powered mobile fitness coaching application using React Native, Expo, TypeScript, and Firebase.
- Built the application's core feature: an AI coach capable of calling users directly and using their profile, goals, history, and habits to deliver personalized conversations before and after workouts.
- Developed personalized workout programs and nutrition plans, dynamically adapting exercises and meals based on user goals, fitness level, injuries, available equipment, dietary preferences, and progress
- Integrated a real-time voice AI agent capable of interacting with the application during live calls, including replacing exercises or meals, modifying workout sessions, and adapting training plans based on user requests.
- Implemented incoming and outgoing voice calls using CallKit, PushKit, WebSockets, audio streaming, barge-in handling, conversational memory, and HealthKit.
- Designed a serverless backend architecture using Firebase Authentication, Firestore, and Cloud Functions, with a focus on security, data synchronization, performance, reliability, and scalability.

2048 Mobile App

- Developed a cross-platform puzzle game with clear separation between business logic, application state, and user interface.
- Implemented the 4x4 game grid, collision logic, tile merging, score management, and win/loss detection, while optimizing touch controls and responsive UI behavior.

Interactive Sky Map | Mobile Development Project

- Built a Flutter sky map app using GPS, accelerometer, and magnetometer data to display celestial objects in real time.
- Integrated NASA and Wikipedia APIs, with local offline data as a fallback.
- Used Provider for state management and implemented real-time updates at 10+ times per second.
- Displayed planets, the Sun, Moon, and constellations on an interactive sky canvas with tap-to-view object details.

EDUCATION & CERTIFICATIONS

Specialized Technician Diploma in Mechatronics - CFMNTIOE, Oujda

Sep 2018 – Sep 2021

ENTREPRENEURIAL EXPERIENCE

Independent Mobile App Publisher — Google Play

2019-2022

- Published and managed multiple mobile applications and games on Google Play, from product preparation through production release.
- Gained hands-on experience with the complete mobile application publishing lifecycle, including Play Store listings, visual assets, releases, updates, and performance monitoring.
- Monetized multiple applications, gaining early experience generating revenue from digital products.
- Analyzed downloads and user behavior and optimized Google Play Store listings to improve application visibility.
- Developed practical knowledge of app store policies, intellectual property requirements, and mobile application publishing standards.

INDEPENDENT SECURITY RESEARCH

- Identified a backend/database misconfiguration in a mobile application that could potentially expose records associated with 1,000,000+ users.
- Identified that the accessible dataset contained user identifiers, names, email addresses, age, gender, location/timezone information, fitness goals, activity levels, body measurements, workout preferences, equipment, motivation data, account progression, and health-related information.

LANGUAGES

English: Professional Proficiency

French: Intermediate Proficiency
